WORLD 1st LISHI C4 2 in 1 PICK

ORIGINAL
LISHI TOOLS

**NEW LISHI INLINE RANGE COMING SOON.
EXCLUSIVE to SGLOCKS**

**DESIGNED & MANUFACTURED BY MR LI. HIMSELF.
A ROCKSTAR OF THE LOCKPICKING WORLD!**

- The **1st** tool to be able to pick & decode inline cylinders without removing the barrel.
- The tools design allows the locksmith to be able to pick each chamber individually assisting with high tensioned top springs and security top pins.
- The 1st stage of release for the inline range will be the most popular broach in Australia, **c4 - 5 pin**.
- Watch this space for further **inline** implementations over the coming months

To see the new C4 pick in action
go to **sglocks.com.au**

pre-order at sglocks.com.au

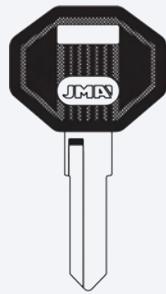

The JMA logo is located in the top left corner. It consists of the letters 'JMA' in a bold, white, sans-serif font, followed by a registered trademark symbol (®). The logo is set against a dark blue background that is part of a diagonal banner.

JMA®

The background of the entire image is a photograph of a yellow excavator at a construction site. The excavator's arm and bucket are the central focus, positioned in the foreground. In the background, the concrete framework of a building under construction is visible, with scaffolding and a clear blue sky with some clouds. The excavator's tracks and a portion of its body are visible at the bottom.

**XTOOL MAJOR SOFTWARE RELEASE
FOR SUZUKI COMING SOON
Integrated Remote Keys & Smart Keys**

**20-Digit
to 4-8 Pin
Bypass**

Models Include:

- Celerio 2014+
- Alto 2009+
- Kizashi 2010+
- SWIFT 2011+
- S-Cross 2013+
- SX4 2010+
- Vitara 2015+

KDX2- CLONING ID46 ONTO NB SERIES REMOTES

The purpose of this month's tech tip is to explain how **ID46** cloning can be utilised with NB series remotes on the KDX2.

NB series remotes are traditionally used for vehicles that carry an integrated transponder/remote system whereas when the transponder is programmed to the vehicle the remote would automatically work.

KEYDIY have developed a way to use the NB series remotes with vehicles that carry any id46 transponder that have a secondary remote programming procedure.

For example, The Holden commodore VE.

Transponder chip: **ID46-GM** (to introduce diagnostically)

Clones onto: **CN3**

Remote path: **Holden VE 3/4 button.433MHZ** (Remote programmed diagnostically)

When replicating the key for this vehicle it is now possible to use a

NB series remote.

After going through the steps of cloning you will see an option to clone via a wired or wireless connection. Use any NB series Uni remote!

Once completed the NB series remote will start the vehicle. Now you can generate the correct remote data to the NB series remote and program it to the vehicle as you would usually do. The remote data and transponder data will store in different locations on the 1x remote.

This procedure will effectively reduce the need to carry ID46 type transponders when offering a spare remote key and earn you KD coins that count towards future ID48 clones.

Watch this space in 2019 for future developments on the KDX2 platform.
