Vehicle
 Vehicle Make: Hyundai
Vehicle Model: Elantra (PROX)
 Vehicle Series: AD
 Vehicle Badge: Elite
 Fuel Type: Petrol - Unleaded ULP
 Engine: G4NA
 Years: 2015 - 2017
 VIN: KMHD*41EMHU#####;KMHD*41FMHU#####

NEW Vehicle Fields

Moving Forward all vehicles will be corrected and or added to the SRS with Make,Model,Series,Badge,Fuel type, Engine & VIN Number.

This is to assist with the variations between badge levels / Fuel types within a Vehicle Series. Often they will have different Keys, Pin reading etc. This feature will ensure that the correct vehicle is being selected each time.

KDX2 - Special Copy

The purpose of this months tech tip is to explain the features & benefits of using the KDX2- Special Copy.

KEYDIY are well on their way to proving themselves as a leader in remote cloning software. We are constantly amazed as to the ability of this software and have had many reports on this function working on Air conditioning remotes, Roller shutters, Garage & Gate remotes & of course lots of Vehicles.

We have launched the 2x garage style remotes this month so that we can extend the usefulness of this tool for those who are already using it for vehicles.

For any uncatalogued remote we would encourage you give KDX2 a go! And let us know!

We have found it to be especially useful with aftermarket remotes for vehicles- & a lot of Garage & gate remotes that we haven't seen before!

The KDX2 Special Copy is not limited to fix code - it seamlessly can clone rolling code (somehow) a lot of the time without needing introduction to the Garage or vehicle.

We have had most reports of KDX2 working with Hyundai/ Kia & Chrysler, Dodge, Jeep & Ram vehicles. We have implemented a new field into the SRS so that we can record the data on what vehicles can be fully cloned.

How to clone.

Using the Mobile KD application> Select Remote function

1. Then select > Special Copy under the Remote Clone column
2. The KDX2 will then prompt you to press the Unlock Button on the original remote - Hold it near the transponder reading loop.
3. The KDX2 will display a string of data - with Chip model, frequency, min pulse width, Data bits & data details.
4. The KDX2 will prompt to press Unlock again
5. The KDX2 will then ask For Lock, Trunk, Panic etc. if your remote does not have these options you can press SKIP.
6. At the end of the procedure the frequency can be adjusted if it is known to you or you believe it should be higher lower etc.
7. You can now Save or Generate
8. When Generating you will have 4x options -

-Wired- Use this with any B series remotes and connect directly to the remote to generate

-Wireless- This can be used when using a NB style remote - and can be uploaded wirelessly. (you can also use wired for NB series)

-Simulate device - Before generating on a remote you can use your phone to simulate the cloned remote

-Special generation- This is for F series style KD remotes that can be altered for button layout etc.

9. Insert the battery into the remote & check it works!
