DESIGNED & BUILT FOR THE MOBILE LOCKSMITH

PRECISION, LIGHTWEIGHT & COMPACT
DESIGN THAT DELIVERS HIGH QUALITY KEY
DUPLICATION.

NYLON ABRASIVE BRUSH

HELPS TO ACHIEVE THE PERFECT FINISH OF THE DUPLICATE
KEY. IN ADDITION BEING MADE OF NYLON PREVENTS THE
OPERATOR FROM SUFFERING ACCIDENTAL CUTS WHILE
WORKING WITH THE MACHINE

FLUID MOVEMENT OF THE CARRIAGE

THE CARRIAGE OFFERS SMOOTH WHEEL MOVEMENTS WHICH
FACILITATES DUPLICATION AND REDUCES THE FORCE NEEDED
TO OPERATE THE MACHINE

Pictured in Carls new van

TESTIMONIAL

"I needed a reliable key duplicator for my new van.
I liked the JMA - NOMAD as it is compact,
but still has a powerful motor allowing me to
duplicate keys fast and accurate.

The Jaws are well spread apart allowing easy
duplication of all key types including flip keys.
It also comes with a mounting bracket for
easy installation".

Carl - Northlakes Locksmiths.

MLAA BRANCH MEETING WRAP UP - VIC

We would like to say a huge 'Thank You' to the MLAA & their members for the great turn out at the first MLAA Branch meeting of the year in Victoria.

The night was a huge success with a large crowd turning up to show support for the **New** MLAA - ML20 Restricted key system & see it on display for the first time.

Congratulations, to Matt from LockCorp for winning a free Lishi pick for the fastest picking time.

Many thanks to the team at Urban Alley Brewery for the great service, food & drink provided .

Lishi picking competition

Huge crowd as always in VIC.

LGA BRANCH MEETING WRAP UP - NSW

Monday 17th February 2020

SG LOCKS 101- 109 Deakin St, Silverwater NSW 2128

We would like to say 'Thank You' to the LGA & their members for allowing us to host the first LGA Branch meeting of the year at SG LOCKS Head office in Silverwater.

There was considerable interest in our JMA - Nomad key machine, Lockton mortice furniture & our new TXT Support service.

Congratulations, to Bill from Trusty Locksmiths for winning the lucky door prize, Taking home a Locksmith tool kit.

It was great to catch up with you all.

- SIEPER Group

TXT- Support: Remote /Smart key identification guide

This tech tip is a step by step guide that will assist with identification of New proximity/ Smart keys that can also be applied to identifying General remote keys. We have found that this has been the most popular enquiry on our New "TXT" support service & have compiled a list of necessary checks that will aid us to find the correct product/remote pathway for all users.

1. Check The SRS

The SRS database has lots of vehicle specific Smart key references including Emergency Blade information. Whilst you may feel your enquiry may not be listed on the SRS, it is still the best place to start as updates will emerge without notice.

2. Vehicle Information

Make, Model, Year & Vin Number. It's imperative that we have this information to begin the process, without it the information for SRS is often lost even after an enquiry has been solved.

3. Image

Using the "TXT" support line, send us a quick picture! A visual indicator can assist us greatly when sourcing information for a New vehicle Key/Remote etc. This can also be used to narrow down remotes when scrolling through the KEYDIY platform.

4. Test the Frequency & Gateway

If you are supplying a spare key/remote etc. test the original to obtain the frequency & gateway.

The frequency will generally be between 300-868 Mhz. But more often than not either 314Mhz or 433 Mhz.

Some new smart keys also jump frequency and are referred to as multi-frequency remotes.

One example of this would be the 128 bit - (H) Smart keys that jump between 312-314 Mhz.

When testing remotes make sure you are away from any interference including Mobile Phones (which will jump the reading up to about 868Mhz).

The gateway is the type of frequency - ASK or FSK.

The KDX2 can determine this when testing and this type of information can be used to narrow down on remote selection.

5. Stickers/ Markings & Part numbers

Remotes will generally have some alphanumeric markings on them somewhere just like any other product has a part number.

These markings can be a very helpful contributing factor when sourcing/selecting a remote.

Example:

- Peugeot/Citroen- On the remote shell where the flip blade retracts there will be either a ce0536 or ce0532 marking. On KEYDIY this marking can be searched and you will find an FSK and ASK version of this.

These markings can be found on the internal or external of the remote. On some Smart keys it will be on the PCB inside the shell.

Our tech support team have a good knowledge of where to look & can guide you through obtaining this data.

6. Transponder data

Integrated transponder keys/ smart keys have both data to operate the central locking & transponder data integrated into the same processor on the PCB. Although they are together in the processor they are two different things entirely & getting accurate data on both is crucial for a fully operating key.

Example:

Reading a Toyota proximity key in your KDX2 you can see the transponder data - The first 2x digits determine the type of transponder used.

In our current range we have 94 & 98 style Toyota smart keys.(more coming soon) This is the 1st factor to be correct to program to the vehicle, secondly the remote data would also need to be correct for the Prox /Remote functions to operate.

Example:

If the wrong transponder data was selected: The Key would not program to the vehicle at all.

If the wrong frequency & gateway was selected: Central locking/ proximity functions would not operate although the vehicle may start when holding it to the Start button.
